

SOLUTION BRIEF

Comprehensive Coverage for Your Entire SaaS Estate

Discover the options for connecting Obsidian Security to your SaaS environment to ensure no application is ever left behind.

SaaS applications provide the tools employees need to succeed and hold the most critical information for your business. If those tools become unavailable or that data is jeopardized, there is a detrimental impact on your organization. Your core applications are the most vulnerable because they contain the majority of your critical data. However, you must also manage a workforce application sprawl and shadow SaaS usage to prevent human error from undermining your security.

Obsidian Security provides a centralized solution for managing risk, maintaining compliance, and investigating and mitigating threats across your entire interconnected SaaS estate.

Every app that matters to you matters to us.

Obsidian covers it all, from robust out-of-the-box support for leading SaaS platforms to our Obsidian App Kit, which enables you to extend visibility and any application uniquely critical to your enterprise.

Robust support for leading SaaS applications

Connect in minutes for comprehensive posture, threat, and integration coverage of your most complex and business-critical services such as Salesforce, Microsoft 365, Workday, and other core applications.

Visibility and control for your sprawling SaaS landscape

Centrally govern your entire SaaS ecosystem. Obsidian sees everything—apps that securely authenticate through an IdP and those that don't, all without deploying additional agents or expending developer resources.

Custom connections for applications uniquely critical to you

The Obsidian App Kit allows you to integrate and pull posture data from any application that isn't supported out of the box—just like an Obsidian engineer would.

Getting Started is Quick and Easy

Our customers are production-ready right from day one. Obsidian connects to your applications in just a few clicks without needing professional services or software to be deployed. You'll receive actionable insights within 24 hours, going back as far as the SaaS app allows, whether 30, 60, or 90 days. It's time to rethink your SaaS security, and we're here to help.
